

Simon & Schuster and EnterSolar Announce Completion of Rooftop Solar Installation in Delran, NJ

NEW YORK and DELRAN, NEW JERSEY, June 16, 2020 — Simon & Schuster, a ViacomCBS company and leading publisher, and EnterSolar, a national commercial solar developer, announced the completion of a 2 MW rooftop solar installation at Simon & Schuster’s Riverside Distribution facility in Delran, NJ. The solar system will generate 2.2 million kilowatts of clean energy annually, equivalent to matching one-third of the facility’s onsite energy use. Through Simon & Schuster’s notable sustainability efforts, the company will reduce its carbon footprint and capture significant energy cost savings. The environmental benefits of the solar system are equivalent to saving 900 acres of forest according to estimates provided by the U.S. Environmental Protection Agency.

“We are proud to have brought this project to completion and thrilled for the opportunity to generate eco-friendly, renewable energy that will significantly reduce our impact on the environment and contribute to a greater resilience of our warehouse operations from grid outages,” said Ramon Gonzalez, Director, Facilities, Simon & Schuster.

“We are delighted to have worked with Simon & Schuster on this important project,” said Audrey Vinant-Tang, Manager, Global Sourcing, ViacomCBS. “The Riverside facility has for years been a linchpin of Simon & Schuster’s distribution operations, and serves as a natural home for our largest solar installation to date. This project demonstrates that doing the right thing for the environment and for our business is attainable, by generating substantial cost reductions under a power purchase agreement, while also reducing our carbon footprint.”
